| <ul style="list-style-type: none"><li>Developed and maintained frontend and backend features for a live e-commerce platform using React.js, Node.js, Express.js, and JWT-based authentication, including secure image uploads and role-protected APIs.</li><li>Collaborated in an Agile team to debug, test, and optimize application performance, utilizing Git/GitHub, Postman, and Jira to deliver production-ready features on schedule.</li></ul> |                              |
| <b>Stealth Startup</b>                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>Jul 2023 – Nov 2023</b>   |
| <i>AI Engineer (contract based)</i>                                                                                                                                                                                                                                                                                                                                                                                                                    | <i>(remote) Florida, USA</i> |
| <ul style="list-style-type: none"><li>Engineered AI-drive solutions leveraging Retrieval-Augmented Generation (RAG) and integrated OpenAI API into Discord bot, scaled the bot to handle discord channel of 100's of users.</li><li>Deployed AI service on AWS Lightsail, utilizing Docker for seamless deployment and Pinecone vector databases to improve data retrieval efficiency.</li></ul>                                                       |                              |

## SKILLS

- **Programming Languages:** Python, Java, Javascript, C/C++, Bash/Shell Scripting, SQL, Solidity.
- **Web Dev:** MERN Stack Development, Next.js, Typescript, Microservices, MongoDB, PostgreSQL, Supabase.
- **AI/ML:** Natural Language Processing (NLP), AI Agents, Langchain, Machine Learning, Deep Learning, Generative AI, Pandas, Scikit-learn, Numpy, Matplotlib, OpenCV.
- **Cloud & DevOps:** AWS Lightsail, Docker.
- **Tools & Libraries:** Socket.IO, Flask, Telegram SDK, Discord SDK, Mongoose, Git, Github.

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                  |
